Holocaust Trauma and Psychic Deformation - Alfred Garwood 2020-08-31

Written by a survivor of the Bergen-Belsen concentration camp, this moving and important book examines the massive psychic trauma suffered by a generation of Holocaust survivors. It not only provides both an intimate and personal reflection on these harrowing events, but also offers an in-depth, clinical perspective on an often-misunderstood phenomenon. As a child during this period, the book begins by examining the author's own experience as a refugee in the aftermath of the Holocaust, the

psychological impact of displacement after such traumatic events, and his attempt to flee its damage through medical and psychoanalytic training. But the second half of the book broadens the perspective to offer a clinical exploration of the psychic effects of surviving the Holocaust. A range of concepts are addressed and explored, from powerlessness and survivor guilt, to psychic security and recovered memories. The book concludes by examining how psychic trauma is processed, and the clinical implications for when disorders emerge and dysfunction results. An insightful and honest account of massive psychic trauma, this remarkable book will resonate not only with those affected by or interested in the experiences of Holocaust survivors, but also any clinical practitioner working with clients who have experienced this type of intense trauma. The Armed Forces Covenant in action? - Great Britain: Parliament: House of Commons: Defence Committee 2013-07-18

A series of Ofsted inspections on Army Apprenticeships conducted in 2013 rated the overall effectiveness as good. This was an improvement over the last inspection in 2009, rated as satisfactory (now called 'requires improvement'). Some 28 per cent of Army recruits were less than 18 years of age. Further information is needed on why the Army is so dependent on recruiting personnel under the age of 18 years compared to the other two Services, and whether steps are being taken to reduce this dependency. Of those recruited in

2012, 3.5 per cent of the Army were rated at entry level 2 for literacy (that of a 7 to 8 year old) and 39 per cent had a literacy level of an eleven year old. If as the MoD states, it has to recruit personnel at whatever level of attainment is available, then it should boost remedial action when recruitment entry standards are particularly low. In light of changes brought about by Future Force 2020, it may be that recruiting personnel with higher levels of attainment would better meet the future needs of the Armed Forces. Whilst the Committee recognises that some recruits may not be eager to take further academic exams, the MoD should encourage more recruits to undertake English and Maths GCSEs which would stand them in good stead for future employment. The MoD has carried out some useful pilot projects with paramedic training and should identify more potential projects to ensure that vital skills paid for by the MoD are not lost to the country

Introduction to Clinical Nutrition, Third Edition - Vishwanath Sardesai 2011-10-11

Dietary factors have been implicated in at least four of the ten leading causes of death in the U.S. (heart disease, cancer, diabetes, and stroke). Nevertheless, physicians frequently receive inadequate training in nutrition to properly counsel their patients. Introduction to Clinical Nutrition, Third Edition discusses the physiologic and metabolic interrelationships of all nutrients and their roles in health maintenance and the prevention of various

diseases. Since the publication of the second edition of this book, new discoveries have revolutionized the field of clinical nutrition. This is true especially with respect to gene-nutrient interaction, epigenetic pathways that contribute to the activation and inactivation of gene expression, the relationship of nutrients to telomere length and health, and personalized nutrition. Highlighting these advances, new and revised topics include: Fiber, antioxidants, nutraceuticals, alternative medicine, and epidemiology DNA, gene-nutrient interaction, epigenetics, and telomeres Nutritional aspects of kidney disease, diabetes, and metabolic syndrome Personalized nutrition and personalized medicine Vegetarianism, the Mediterranean diet, and other popular dietary practices Obesity and cholesterol Designed as a textbook for students in conventional medicine, osteopathy, dentistry, dietetics, nursing, pharmacy, and public health, the book focuses on the critical biochemical and physiological aspects of nutrients. It includes clinical case studies to clarify topics at the end of most chapters and references to facilitate further study.
