Hemostasis and Thrombosis in Obstetrics and Gynecology - Michael J. Paidas 2011-07-05
Reproductive hemostasis: A global approach to a global challenge A hemostatic change in women through their reproductive lifetime is emerging as an issue of global importance. No wonder, as obstetric hemorrhage remains a major cause of maternal mortality in both developed and developing countries. Thrombophilias and pulmonary embolisms are a threat to maternal and fetal well-being. Hemostasis and Thrombosis in Obstetrics & Gynecology provides a framework for assessing and managing hemostatic disorders in women. Written by an international team, it provides globally applicable guidelines for obstetric hematology. The practical approach to clinical management

includes: Hematologic changes in pregnancy
Red cell disorders Platelet disorders Inherited and acquired thrombophilia Inherited bleeding disorders Postpartum hemorrhage Blood and bleeding disorders in women can be managed by obstetrician-gynecologists or hematologists, separately or together. Hemostasis and Thrombosis in Obstetrics & Gynecology provides specialists from both disciplines with the information necessary to manage their patients effectively.

Birth Settings in America - National Academies of Sciences, Engineering, and Medicine 2020-05-01

The delivery of high quality and equitable care for both mothers and newborns is complex and requires efforts across many sectors. The United States spends more on childbirth than any other country in the world, yet outcomes are worse than other high-resource countries, and even worse for Black and Native American women. There are a variety of factors that influence

childbirth, including social determinants such as income, educational levels, access to care, financing, transportation, structural racism and geographic variability in birth settings. It is important to reevaluate the United States' approach to maternal and newborn care through the lens of these factors across multiple disciplines. Birth Settings in America: Outcomes, Quality, Access, and Choice reviews and evaluates maternal and newborn care in the United States, the epidemiology of social and clinical risks in pregnancy and childbirth, birth settings research, and access to and choice of birth settings.

Safe Abortion - Organisation mondiale de la santé 2003-05-13

At a UN General Assembly Special Session in 1999, governments recognised unsafe abortion as a major public health concern, and pledged their commitment to reduce the need for abortion through expanded and improved family planning services, as well as ensure abortion

services should be safe and accessible. This technical and policy guidance provides a comprehensive overview of the many actions that can be taken in health systems to ensure that women have access to good quality abortion services as allowed by law.

WHO Recommendations on Antenatal Care for a Positive Pregnancy Experience - World Health Organization 2017-01-15

Within the continuum of reproductive health care, antenatal care provides a platform for

important health-care functions, including health promotion, screening and diagnosis, and disease prevention. It has been established that, by implementing timely and appropriate evidence-based practices, antenatal care can save lives. Endorsed by the United Nations Secretary-General, this is a comprehensive WHO guideline on routine antenatal care for pregnant women and adolescent girls. It aims to complement existing WHO guidelines on the management of specific pregnancy-related complications. The guidance captures the complex nature of the antenatal care issues surrounding healthcare practices and delivery, and prioritizes person-centered health and well-being --- not only the prevention of death and morbidity --- in accordance with a human rights-based approach.

The Antiphospholipid Syndrome - Ronald A. Asherson 2018-05-04

points Enhanced narrative protocols Key Features: Provides interprofessional triage protocol guidance for ED and OB triage settings Delivers protocols and guidelines for over 30 emergent care situations Includes plentiful diagnostic and imaging guidelines with accompanying figures Formatted consistently for quick access Offers algorithms, protocols, diagnostic imaging, and best evidence for each condition

Management of Labor and Delivery - George A. Macones 2016-01-13

The process of labor and delivery has been one of the most perilous activities in human life. The awkward evolutionary compromises giving rise to humans makes birthing potentially life threatening for both mother and child. Despite the development of modern care, labor and delivery continues to be a dangerous process even though the levels of fatality have decreased over the past several decades. This clinically focused guide to modern labor and delivery care

covers low and high-risk situations, the approach of the team in achieving a successful outcome and what to consider when quick decisions have to be made. Aimed at both trainee and practicing obstetrician-gynecologists, this new edition includes practical guidance such as algorithms, protocols, and quick-reference summaries. It is squarely focused on the process of birth and concentrates on modern clinical concerns, blending science with clinical applications.

Algorithms for Obstetrics and Gynaecology - Sambit Mukhopadhyay 2014

Algorithms in Obstetrics and Gynaecology presents the core knowledge needed to tackle all situations in obstetrics and gynaecology, in a structured fashion. All algorithms are designed to support rapid decision making in the most clinically relevant situations to minimise the risks of a poor outcome. A range of clinical problems are covered from common non-life-threatening emergencies such as hyperemesis in pregnancy, to life-threatening acute events such

as ectopic pregnancy, acute fetal distress or maternal collapse. Each topic is presented as either an algorithm, a care pathway, or table of key information and has been carefully structured to ensure a logical progression of thought to aid anticipation, early diagnosis and prompt and appropriate management. Accompanying key learning points highlight the essential information from the topic. Based on current national guidelines and clinical evidence, the algorithms and care pathways can be used as a reliable and practical resource for day to day practice in obstetrics and gynaecology.

Managing Complications in Pregnancy and Childbirth - World Health Organization 2003

The emphasis of the manual is on rapid assessment and decision making. The clinical action steps are based on clinical assessment with limited reliance on laboratory or other tests and most are possible in a variety of clinical settings.

WHO Recommendations for the Prevention and Treatment of Postpartum Haemorrhage

- World Health Organization 2012-09-26

Postpartum Haemorrhage (PPH) is commonly defined as a blood loss of 500 ml or more within 24 hours after birth. PPH is the leading cause of maternal mortality in low-income countries and the primary cause of nearly one quarter of all maternal deaths globally. Most deaths resulting from PPH occur during the first 24 hours after birth: the majority of these could be avoided through the use of prophylactic uterotonics during the third stage of labour and by timely and appropriate patient management. Improving health care for women during childbirth in order to prevent and treat PPH is an essential step towards the achievement of the Millennium Development Goals. The primary objective of this guideline therefore is to provide a foundation for the strategic policy and programme development needed to ensure the sustainable implementation of effective

interventions for reducing the global burden of PPH.

Diagnostic Gynecologic and Obstetric Pathology E-Book - Christopher P. Crum
2017-10-13

Comprehensive and practice-oriented, the fully updated 3rd Edition of this easy-to-use text covers the full range of obstetric and gynecologic pathology, including information on treatment and patient management. Written largely by the pathology and clinical faculty at Harvard's Brigham and Women's Hospital, it covers the most up-to-date information available in the field, including molecular genetics and diagnostics. Drs. Christopher P. Crum and Marisa R. Nucci are joined by new editors Scott R. Granter, Brooke E. Howitt, Mana M. Parast, and Theonia K. Boyd, to provide complete, beautifully illustrated coverage of both neoplastic and non-neoplastic disorders of the female genital system, ideal for improving pathological diagnosis. Provides distinct

diagnostic/differential diagnostic criteria for any potential obstetric/gynecologic specimen encountered in practice. Features more than 2,250 full-color images, key points at the end of each chapter, and an appendix with commonly used ICD-10 codes Covers topics not often found in gynecologic pathology textbooks, such as vulvodynia, and diseases of the anus.

Approaches topics from a practice-oriented point of view, beginning with clinical presentation and progressing through histopathology, differential diagnosis, and treatment for each disorder. Emphasizes new practice issues and their biologic basis including approaches to vulvar, cervical and endometrial precursors as well as the underpinnings of cervical, endometrial and ovarian cancer. A comprehensive look at mesenchymal neoplasia, including not only lower genital tract and uterus but also the retroperitoneum.
