Architectural Programming:  
Creative Techniques for Design  
Professionals - Robert R.  
Kumlin 1995-05-22

Architectural programming is the key to successful design. It is the crucial process of gathering, organizing, and assessing a client's building-use information. This process

includes design concepts and program objectives ... staff and employee projections ... current and future space requirements ... adjacencies and relationships ... equipment and utility requirements ... project cost ... and more. This unique book and diskette provide architects, engineers,

facilities managers, corporate and institutional administrators, and others with an effective method for gathering and assessing data needed to successfully design virtually any type of building - from office towers and educational facilities to laboratories and medical facilities.

**Basics Project Management Architecture** - Bert Bielefeld 2013

The core task of the classic architect, in addition to architectural design and planning work, is management of the construction project: from planning operations and tendering, to scheduling and cost planning and construction management. These important practical tasks are usually only covered during studies by one

subject: Construction Management or Construction Economics, and thus treated as less significant. But every architect must master these abilities in order to manage and realize his or her own projects successfully.

*The Routledge Handbook of Transport Economics -*

Jonathan Cowie 2017-08-07

The Routledge Handbook of Transport Economics offers the first state of the art overview of the discipline of transport economics as it stands today, reflective of key research and policy. Transport is an important area of study and one which is problem rich, stimulating a great deal of debate in areas which impact on everyday lives. Much of this focuses on the practicalities of the modern-day phenomenon of mass movement and all of the issues which surround it. The discipline of economics is central to this debate, and consequently the study and application of transport economics has a chief role to play in seeking to address subjects relating to major

transport issues. It can be argued that at the very heart of any transport issue or problem lies the underlying economics of the situation - understand that and you alleviate the problem. Featuring contributions from world-leading scholars and practitioners from across the globe, all of the chapters within this book are written from a practical perspective; theory is applied and developed using real-world examples. The book examines concepts, issues, ideas and practicalities of transport provision in five key topic areas: public transport public transport reform economic development and transport modelling transport and the environment freight transport. A real strength of the book is in linking theory to practice, and hence the 'economics' that are examined in this text are not the economics of the abstract, but rather the economics of everyday living. Practical and insightful, this volume is an essential reference for any student or researcher working

in all areas of transport provision, ranging from planning, appraisal, regulation and freight; and for all practitioners looking to develop their professional knowledge and who are seeking professional accreditation.

Strategy for Managing Complex Systems - Fredmund Malik 2016-05-12

"Malik demonstrates that management and management theory have strong foundations in systems science, and most specifically in a certain type of cybernetics of truly complex systems, of organismic, self-organizing, and evolving systems. This book provides the basics on how to create robust, functional, and sustainably viable systems. One of the reasons why it has become a classic on management cybernetics, now

in its 11th edition, is that the strategies and heuristic principles of complexity management are still relevant - now more than ever."--Back cover.

**Risikomanagement** - Wilfried Hoffmann 2017-10-24

Das Buch erläutert übersichtlich, was sich hinter dem Begriff "Risikomanagement" verbirgt. Es liefert zudem Handlungsempfehlungen und -anleitungen. Bauprojekte werden von unterschiedlichen Risiken begleitet, die sich auf die gesteckten Ziele auswirken können. Um die zu Projektbeginn definierten Ziele am Ende des Projekts auch wirklich zu erreichen, sind regelmäßig Entscheidungen zu treffen. Eine zielführende Entscheidung kann jedoch nur dann mit großer Sicherheit getroffen werden, wenn alle Abhängigkeiten bekannt sind. Sind den Projektbeteiligten diese Abhängigkeiten unbekannt, bestehen Unsicherheiten, die sich aus einem Anteil Ungewissheit (Wagnis) und einem Anteil

Risiken zusammensetzen. Die Risiken lassen sich je nach Ausprägung als Gefahren (negative Zielerreichung) oder aber als Chancen (positive Zielabweichung) darstellen. Ein im Projekt etabliertes Risikomanagement hilft, die immanenten Risiken maßgeblich zu minimieren. Es kann die negativen Abweichungen in den Projektprozessen optimieren und einen Mittelweg zwischen Gefahren und Chancen austarieren.

### **Stakeholder Theory and Organizational Ethics -**

Robert Phillips 2003  
Recent corporate scandals have brought attention to business ethics, yet there are few books available that cover an important aspect of this topic. In this timely study of organizational ethics and stakeholder theory - which holds that business is beholden

not only to shareholders but also to customers, employees, suppliers, management, and the community - Robert Phillips challenges the idea that the theory has no "moral underpinnings" and suggests useful ways to define which groups are or are not legitimate stakeholders. This study is based on the work of John Rawls, the most widely cited moral and political philosopher of the 20th century.

## **Building Information**

**Modeling** - André Borrmann  
2018-09-19

Building Information Modeling (BIM) refers to the consistent and continuous use of digital information throughout the entire lifecycle of a built facility, including its design, construction and operation. In order to exploit BIM methods to their full potential, a fundamental grasp of their key principles and applications is essential. Accordingly, this book combines discussions of theoretical foundations with reports from the industry on currently applied best practices. The book's content is divided into six parts: Part I discusses the technological basics of BIM and addresses computational methods for the geometric and semantic modeling of buildings, as well as methods for process modeling. Next, Part II covers the important aspect of the interoperability of BIM software products and

describes in detail the standardized data format Industry Foundation Classes. It presents the different classification systems, discusses the data format CityGML for describing 3D city models and COBie for handing over data to clients, and also provides an overview of BIM programming tools and interfaces. Part III is dedicated to the philosophy, organization and technical implementation of BIM-based collaboration, and discusses the impact on legal issues including construction contracts. In turn, Part IV covers a wide range of BIM use cases in the different lifecycle phases of a built facility, including the use of BIM for design coordination, structural analysis, energy analysis, code compliance checking, quantity take-off, prefabrication, progress monitoring and operation. In Part V, a number of design and construction companies report on the current state of BIM adoption in connection with actual BIM projects, and discuss the approach pursued

for the shift toward BIM, including the hurdles taken. Lastly, Part VI summarizes the book's content and provides an outlook on future developments. The book was written both for professionals using or programming such tools, and for students in Architecture and Construction Engineering programs.

*Digital Papyrology I* - Nicola Reggiani 2017-09-11

Since the very beginnings of the digital humanities, Papyrology has been in the vanguard of the application of information technologies to its own scientific purposes, for both theoretical and practical reasons (the strong awareness towards the problems of human memory and the material ways of preserving it; the need to work with a multifarious and overwhelming amount of different data). After more than thirty years of development, we have now at our disposal the most advanced tools to make papyrological studies more and more effective, and even to create a new conception of "papyrology" and a new model

of "edition" of the ancient documents. At this turning point, it is important to build an epistemological framework including all the different expressions of Digital Papyrology, to trace a historical sketch setting the background of the contemporary tools, and to provide a clear overview of the current theoretical and technological trends, so that all the possibilities currently available can be exploited following uniform pathways. The volume represents an innovative attempt to deal with such topics, usually relegated into very quick and general treatments within journal articles or papyrological handbooks.

*Inconsistencies* - Marcus Steinweg 2017-10-06  
Meditations, aphorisms, maxims, notes, and comments construct a philosophy of thought congruent with the inconsistency of our reality. Those who continue to think never return to their point of departure. —Inconsistencies  
These 130 short

texts—aphoristic, interlacing, and sometimes perplexing—target a perennial philosophical problem: Our consciousness and our experience of reality are inconsistent, fragmentary, and unstable; God is dead, and our identity as subjects discordant. How can we establish a new mode of thought that does not cling to new gods or the false security of rationality? Marcus Steinweg, as he did in his earlier book *The Terror of Evidence*, constructs a philosophical position from fragments, maxims, meditations, and notes, formulating a philosophy of thought that expresses and enacts the inconsistency of our reality. Steinweg considers, among other topics, life as a game (“To think is to play because no thought is firmly grounded”); sexuality (“wasteful, contradictory, and contingent”); desire (“Desire has a thousand names; It's earned none of them”); reality (“overdetermined and excessively complex”); and world (“a nonconcept”). He

disposes of philosophy in one sentence (“Philosophy is a continual process of its own redefinition.”) but spends multiple pages on “A Tear in Immanence,” invoking Nietzsche, Heidegger, Sartre, and others. He describes “Wandering with Foucault” (“Thought entails wandering as well as straying into madness”) and brings together Derrida and Debord. He poses a question: “Why should a cat be more mysterious than a dog?” and later answers one: “Beauty is truth because truth is beauty.” By the end, we have accompanied Steinweg on converging trains of thought. “Thinking means continuing to think,” he writes, adding “But thinking can only pose questions by answering others.” The question of inconsistency? Asked and answered, and asked. [Programming for Design](#) - Edith Cherry 1998-11-10 Quickly master architectural programming concepts, skills, and techniques In the essential discipline of architectural programming, the ideas of

philosophy, sociology, anthropology, psychology, and history find their focus in the realities of site conditions, budgets, and functionality. Author Edith Cherry vividly demonstrates in this inspiring tutorial that the programming process not only helps architects avoid the endless design revisions occurring in most projects, but that it is also the key to designing for optimal form and function. Programming for Design lets you rapidly acquire the knowledge and skills needed to successfully program a moderate-size space. Rather than simply describe basic principles and practices, this straightforward guide helps you master architectural programming by actually doing it. Professor Cherry identifies the central issues involved and describes the skills needed to work with clients to identify problems to be solved by a design effort. Emphasizing designing for people, she offers proven strategies and techniques for goal setting, information gathering and

analysis, concept development, program synthesis, and communicating with clients. The book is also devoted to practical applications. The author walks you step-by-step through a project of your own choosing, providing numerous examples and four case studies within each step that vividly illustrate how to effectively gather, process, and communicate information. Programming for Design features more than 200 supporting illustrations, diagrams, and sidebars appearing throughout the text, reproducing pithy sayings by such far-flung figures as Plato and Yogi Berra, Einstein and Lao Tzu, that help relate the programming process to other disciplines.

**Change your life: A Guide to success and enjoyment -**

Johann Zillmann 2016-07-22  
Transformation is a door, which can only be opened from the inside. Most of us see improvement potential in certain areas of life. Yet we often lack inspiration, willpower and resilience to realize our ambitious plans. In fact it is very easy to cultivate new routines once we obtained clarity about behavioral patterns, our personality and individual goals. Johann Zillmann takes us on a journey to ourselves. The starting point is the insight that life itself

means change. Also, striving for a better existence in primeval and has to be done in a self-responsible way. This implies that we know where we are from, who we are and where we want to go. Based on the vision we can develop plans and execute them. Finally the circle closes by acknowledging that we have to change continuously, challenge our objectives, adjust our plans and align our actions respectively. As soon as we proactively trigger transformational processes, we become the captain of our own ship and can navigate in an agile way. Change your Life is thus a practical guide for everyone, who expects more than mediocracy. It is an ode to life and the creative forces within us.

The Last Christians - Andreas Knapp 2017

A Westerner's travels among the persecuted and displaced Christian remnant in Iraq and Syria teach him much about faith under fire. Inside Syria and Iraq, and even along the refugee trail, they're a religious

minority persecuted for their Christian faith. Outside the Middle East, they're suspect because of their nationality. A small remnant of Christians is on the run from the Islamic State. If they are wiped out, or scattered to the corners of the earth, the language that Jesus spoke may be lost forever - along with the witness of a church that has modeled Jesus' way of nonviolence and enemy-love for two millennia. The kidnapping, enslavement, torture, and murder of Christians by the Islamic State, or ISIS, have been detailed by journalists, as have the jihadists' deliberate efforts to destroy the cultural heritage of a region that is the cradle of Christianity. But some stories run deep, and without a better understanding of the religious and historical roots of the present conflict, history will keep repeating itself century after century. Andreas Knapp, a priest who works with refugees in Germany, travelled to camps for displaced people in the Kurdish region of northern Iraq to collect stories

of survivors - and to seek answers to troubling questions about the link between religion and violence. He found Christians who today still speak Syriac, a dialect of Aramaic, the language of Jesus. The uprooted remnant of ancient churches, they doggedly continue to practice their faith despite the odds. Their devastating eyewitness reports make it clear why millions are fleeing the Middle East. Yet, remarkably, though these last Christians hold little hope of ever returning to their homes, they also harbor no thirst for revenge. Could it be that they - along with the Christians of the West, whose interest will determine their fate - hold the key to breaking the cycle of violence in the region? Includes sixteen pages of color photographs.

*Architectural Programming* -  
Donna P. Duerk 1993

The Eternal Covenant - Daniel James Pedersen 2017-08-21  
Schleiermacher's readers have long been familiar with his proposal for an 'eternal

covenant' between theology and natural science. Yet there is disagreement both about what this 'covenant' amounts to, why Schleiermacher proposed it, and how he meant it to be persuasive. In *The Eternal Covenant*, Pedersen argues, contrary to received wisdom, that the 'eternal covenant' is not first a methodological or political proposal but is, rather, the end result of a complex case from the doctrine of God, the notion of a world, and an account of divine action. With his compound case against miracles, Schleiermacher secures the in-principle explicability of everything in the world through natural causes. However, his case is not only negative. Far from a mere concession, the eternal covenant is an argument for what Schleiermacher calls, 'the essential identity of ethics and natural philosophy.' Indeed, because the nature system is both intended for love and wisely ordered, the world is a supremely beautiful divine artwork and is, therefore, the

absolute self-revelation of God. Schleiermacher's case is a challenging alternative to reigning accounts of God, nature, divine action, and the relationship between religion and science.

## Reformation of Prayerbooks -

Chaoluan Kao 2017-11-13

In her study Chaoluan Kao offers a comprehensive investigation of popular piety at the time of the European Reformations through the study of sixteenth- and seventeenth-century Protestant prayerbooks. It pursues a historical-contextual approach to spirituality by integrating social and religious history in order to yield a deeper understanding of both the history of Christian piety and of church history in general. The study explores seven prayerbooks by German authors and seventeen English prayerbooks from the Reformation and post-Reformation as well as from Lutheran, Anglican, and Puritan traditions, examining them as spiritual texts with social and theological significance that helped disseminate popular understandings of Protestant piety. Early Protestant piety required intellectual engagement, emphasized a faithful and heartfelt attitude in

approaching God, and urged regular exercise in prayer and reading. Early Protestant prayerbooks modeled for their readers a Protestant piety that was a fervent spiritual practice solidly grounded in the social context and connections of its practitioners. Through those books, Reformation could be understood as redefining the meanings of people's spiritual lives and re-discovering of a pious life. In a broader sense, they functioned as a channel of historical and spiritual transition, which not only tells us the transformation and transmission of Reformation historically but also signifies the development of Christian spirituality. The social-historical study of the prayerbooks furthers our understanding of continuity, change, and inter-confessional influence in the Christian piety of early modern Europe.

**Terminmanagement** - Walter Volkmann 2017-10-24

Das Buch umfasst Terminmanagement, aufbauend auf der Matrix der Einzelplanungsleistungen der

HOAI-Leistungsbilder. Es folgt dazu dem AHO-Leistungsbild des DVP. Terminplanung und Fortschrittskontrolle sind die wichtigsten Bestandteile. Terminmanagement ist eine der drei Säulen des Bauprojektmanagements: Kosten, Termine, Qualität und Quantitäten. Terminmanagement gehört zum Kernwissen eines Projektsteuerers sowie der beteiligten Objektplaner. Die Kenntnis eines Termin-Softwareprogramms ist für das Verständnis von Terminen bei weitem nicht ausreichend, denn eine Planung der Planung ist für eine seriöse Terminplanung Voraussetzung - wie, das wird hier beschrieben. Die gleichartige Struktur der HOAI-Leistungsbilder für Objektplaner sowie der darin enthaltenen Phaseneinteilung gestattet einen matrixartigen Aufbau der Einzelplanungsleistungen. Das AHO-Leistungsbild des Verbandes der Projektmanager in der Bau- und Immobilienwirtschaft folgt

diesem Vorbild. Dadurch wird es möglich, dass verschiedene Fachdisziplinen parallel dasselbe Problem bearbeiten, bei annähernd gleichem Informationsstand. Ziel der Terminplanung ist das ungehinderte Bearbeiten und Ineinandergreifen vieler Leistungsteile (Arbeitspäckchen). Dabei wird gezeigt, wie schnelle Projektdurchlaufzeiten und Fehlervermeidung durch Informationsgleichstand erreichbar sind. Die rechtzeitige Vorlage gut koordinierter Zeichnungen der Ausführungsplanung, vor allem aber der Leistungsverzeichnisse und Vergaben, werden möglich, dabei wird der notwendige Spielraum für gründliche Analysen und Alternativen beschrieben. Ziel der Fortschrittskontrolle ist schließlich die Analyse und Bewertung des augenblicklichen Leistungsstandes, um Empfehlungen zur Behebung von Abweichungen, Änderungen und Nachträgen

abgeben zu können.

*Memory, Conflict and New  
Media* - Ellen Rutten  
2013-04-12

This book examines the online memory wars in post-Soviet states - where political conflicts take the shape of heated debates about the recent past, and especially World War II and Soviet socialism. To this day, former socialist states face the challenge of constructing national identities, producing national memories, and relating to the Soviet legacy. Their pasts are principally intertwined: changing readings of history in one country generate fierce reactions in others. In this transnational memory war, digital media form a pivotal discursive space

- one that provides speakers with radically new commemorative tools. Uniting contributions by leading scholars in the field, *Memory, Conflict and New Media* is the first book-length publication to analyse how new media serve as a site of political and national identity building in post-socialist states. The book also examines how the construction of online identity is irreversibly affected by thinking about the past in this geopolitical domain. By highlighting post-socialist memory's digital mediations and digital memory's transcultural scope, the volume succeeds in a twofold aim: to deepen and refine both (post-socialist) memory theory and digital-memory studies. This book will be of much interest to students of media studies, post-Soviet studies, Eastern European Politics, memory studies and International Relations in general.
