Abnormal Psychology - Deborah C. Beidel 2011-10-27

Real Science. Real Life. Deborah Beidel, Cynthia Bulik, and Melinda Stanley take a scientist-practitioner-educator approach and help students see and understand the connection between the science and practice of abnormal psychology. This leading-edge author team, consisting of three active researchers, clinicians, and educators, take a scientist-practitioner approach emphasizing the rich blend of both the science and practice of abnormal psychology throughout the text. The developmental trajectory of each condition is discussed where appropriate and scientific findings with respect to race and gender are incorporated into discussions about each condition. Biological findings are integrated with findings from social and behavioral sciences, highlighting the complexity of abnormal behavior and how it is often influenced by a wide range of variables. The authors encourage students to look at psychological disorders along a continuum and analyze disorders in terms of whether the individual's behavior creates distress or impairs daily functioning. Importantly, an effort is made to "bring to life" the nature of these conditions by providing vivid clinical descriptions. In addition to short descriptions used liberally throughout each chapter, a fully integrated case study is presented at the end of each chapter, again illustrating the interplay of biological, psychosocial and emotional factors. Teaching & Learning Experience Personalize Learning -- The new MyPsychLab delivers proven results in helping students succeed, provides engaging experiences that personalize learning, and comes from a trusted partner with educational expertise and a deep commitment to helping students and instructors achieve their goals. Improve Critical Thinking -- Students are encouraged to think critically about current controversial issues in the field and to consider the fine line between "normal" and "abnormal" behavior. Engage Students -- Real cases in the text based on the authors' own clinical files along with videos of real people with psychological disorders on MyPsychLab engage students in the material and help to destigmatize disorders. Explore Research -- Icons highlight what is know about the developmental trajectory of each condition. Virtual Reality therapy and other topics engage students in current research and help them see the relationship between science and clinical practice. Support Instructors -- Speaking Out video interviews featuring real people with psychological disorders, along with their family and friends, help instructors engage students both in and out of the classroom. Included on DVD, on MyPsychLab, and embedded in the PowerPoint slides, these and other resources provide extensive support for instructors. The History of White People - Nell Irvin Painter 2011-04-18

A New York Times bestseller: "This terrific new book . . . [explores] the 'notion of whiteness,' an idea as dangerous as it is seductive."—Boston Globe Telling perhaps the most important forgotten story in American history, eminent historian Nell Irvin Painter guides us through more than two thousand years of Western civilization, illuminating not only the invention of race but also the frequent praise of "whiteness" for economic, scientific, and political ends. A story filled with towering historical figures, *The History of White People* closes a huge gap in literature that has long focused on the non-white and forcefully reminds us that the concept of "race" is an all-too-human invention whose meaning, importance, and reality have changed as it has been driven by a long and rich history of events.

Biology and Regulation of Blood-Tissue Barriers - C. Yan Cheng 2014-01-25

This book was written by many outstanding investigators who have spent decades to study different aspects of blood-tissue barrier function. They have summarized some of the latest and fascinating development in their fields of research including the blood-brain barrier, the blood-retinal barrier, the gut barrier, the blood-biliary barrier, the blood-follicle barrier, the blood-epididymis barrier, the blood-testis barrier, the tight junction barrier in general as well as barriers in the female reproductive tract. Included are also chapters that focus on topics that are physiologically applicable to all blood-tissue barriers. Many of these chapters also include information on specific human diseases, such as pathological changes of the gut barrier that cause bowel disorders resulting from inflammation of the epithelial lining in the intestine, and infertility in men as a result of disruption of the blood-epididymal and/or blood-testis barriers; and on new therapeutic approaches (e.g., drug delivery across the blood-brain and the blood-retinal barriers).

Investigating Biology - Judith Giles Morgan 1999

With its distinctive investigative approach to learning, this effective laboratory manual encourages students to become detectives of science. While teaching the basic materials and procedures important for all biology majors to learn, the authors also invite students to pose hypotheses, make predictions, conduct open-ended experiments, collect data, and then apply the results to new problems. The result of this "process of science" approach is that students learn to think creatively, just as scientists do. Laboratory exercises are divided into three categories: investigative, traditional, and observational.

Renal Cell Carcinoma - Steven C. Campbell 2012-09-26

Renal Cell Carcinoma: Clinical Management provides a comprehensive, state-of-the-art review of this field, and will serve as a valuable resource for clinicians, surgeons and researchers with an interest in kidney cancer. The volume reviews new data about risk factors for the disease, profiles the new staging system for renal cell carcinoma (RCC), highlights our current understanding of familial syndromes of RCC and their molecular genetics, and provides new perspectives about imaging of renal tumors. For localized disease, a greater appreciation of nephron-sparing approaches and the importance of preservation of renal function is discussed in detail. Advances in surgical techniques are highlighted. For metastatic disease, the molecular biology of kidney cancer is reviewed in a concise and understandable manner, including the data that has fostered novel targeted approaches that have revolutionized management. The several landmark phase III targeted therapy trials published in the last few years are placed in context with respect to current management. Integration of surgery and systemic therapy through cytoreductive and consolidative approaches has yielded provocative data that promises to further advance the field, and major advances in this domain are also be discussed.

Biology - Neil A. Campbell 2005

The authors have updated each of the books eight units to reflect the progress in our understanding of life at many levels, from molecules to ecosystems. The sixth edition has a new chapter that introduces students to science as a way of knowing nature. A new feature highlights examples of the process of science throughout the book, and each chapter contains a process of science question that encourages students to experience science. Media activities allow additional practice with experimentation and analysis of data, and interviews with various researchers humanize science as a social activity.

Scientific American Biology for a Changing World - Michele Shuster 2011-02-25

To view sample chapters and more information visit www.whfreeman.com/SABiologyPreview All of us involved in science education understand the importance of scientific literacy. How do we get the attention of a nonscientist? And if we can get it, how do we keep it - not only for the duration of the course or the chapter in a textbook but beyond? How do we convey in our courses and our textbooks not just what we know but also how science is done? These are the challenges we hope to address with our new series of textbooks specifically for the nonscientist. With this series, W. H. Freeman and Scientific American join forces not just to engage nonscientists but to equip them critical life tools.
